SCBA-05: Cylinder Replacement

1. Verify cylinder valve is closed and all air is purged from system
2. Remove high pressure coupling from cylinder
3. Disengage cylinder retention strap
4. Grasp cylinder below the retention strap, push the locking tab below the valve, lift cylinder free from the bottom hook and remove.
5. Replace with fully charged cylinder
6. Slide the top of the cylinder upward under the strap and engage the cylinder hanger in the hook at the bottom of the back frame.
7. Secure the cylinder in place by pushing the latch toward the back frame to lock the cylinder latch
8. Inspect the high pressure coupling and verify the gasket seal is present and undamaged
9. Align the high pressure coupling with the cylinder valve and tighten by hand.
