

The second method of inflating the fire hose is by directly connecting the air hose located in the rear officer side of Rescue 1; to the fire hose inflator valve.

- Connect the air hose to the fire hose inflator valve
- Open the valve handle until the hose is inflated
- Control the amount of air needed by turning on or off the valve handle
- CAUTION—there is only 100 feet of truck mounted air hose on the reel in Rescue. Scene access will ultimately determine which inflation method is needed

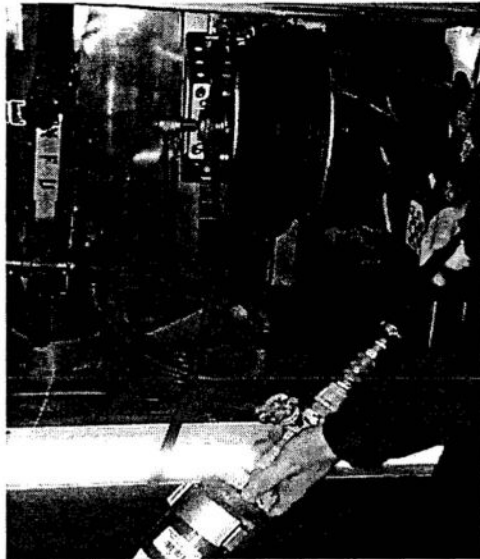

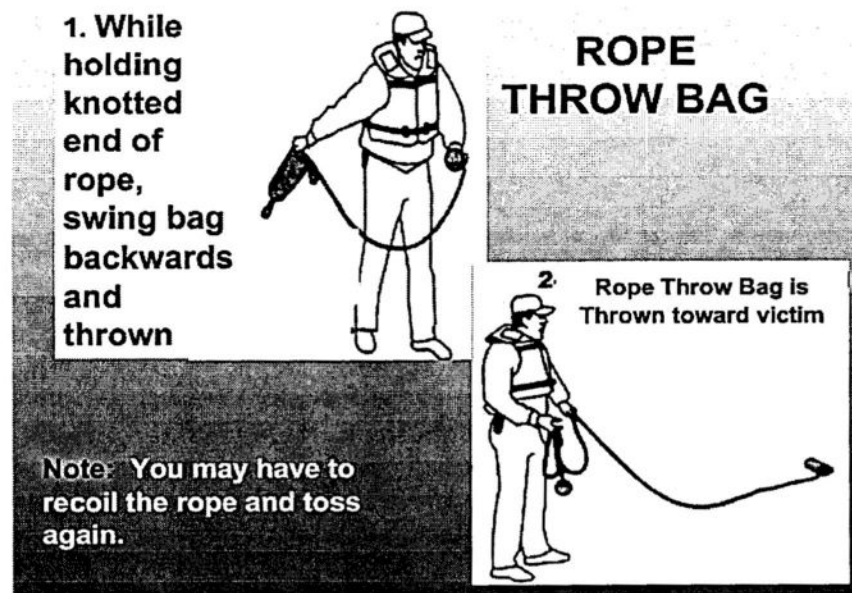

Figure 2- throw bag techniques

Throw bags are located in both Ambulances, in the Rescue, and Car 2.
